STRETCHKOTE is a premium, integrally colored elastomeric based decorative and protective coating that provides excellent crack bridging qualities. Stretchkote is available in multiple colors. All Ultrakote's finishes and coatings contain additives to resist mildew, algae and fungus.

**Uses:**

Stretchkote is an exterior elastomeric paint with high elongation properties for bridging cracks in masonry, concrete, stucco or synthetic substrates. Stretchkote offers excellent weather resistance.

**Surface Preparation:**

Surface must be clean and free of bonding-inhibiting materials such as dirt, dust, rust, grease, oil, efflorescence, mildew, fungus, form-release agents or any other contaminants. Remove and repair any loose paint, mortar, stucco, concrete or masonry by water blasting, sand blasting, scraping or using a wire brush. Repair all cracks with approved patching compound. If applying over a painted surface, test paint to make sure it is load bearing.

**Product Specifications:**

**Packaging:**

5 gallon plastic pail 52 lbs. (23.5 kg)

**Coverage:**

Approximate coverage is 400 sq. ft. per 5 gal pail @ 10 mils wet. Dry thickness (coverage will vary depending on substrate, surface texture and application technique.) Two coats may be necessary to achieve the recommended mill thickness.

**Color:**

All Ultrakote Standard Colors and custom colors on written request.

**Storage:**

Store in cool dry place away from direct sunlight.

**Clean up:**

Clean tools immediately after use. Remove all debris from the surrounding areas immediately following the application process.

**Shelf Life:**

1 year
stretchkote

Interior / Exterior Elastomeric Coating

Mixing:

Prior to use, mix until desired consistency is achieved. One quart (16 oz.) of potable water may be added to 5 gallons of Stretchkote.

Application:

Stretchkote may be applied by roller, brush or spray equipment (spray tip should be a 5-19 through a 6-23). Always apply Stretchkote in a continuous application, working to a wet edge to eliminate cold joints.

Curing / Drying:

Drying time averages 3 hours depending on ambient temperature, humidity and film thickness. Stretchkote will dry completely within 12 hours.

Limitations:

Stretchkote should be applied when surface and ambient conditions are between 45°F and 100°F and should be protected from wet weather for a minimum of 24 hours. Substrate must have a pH of 12 or lower. Stretchkote has excellent bonding to almost any surface except certain plastics, rubber, metal and mastics. Glossy surfaces should be sanded prior to application.
