

UltraKote 1 Pre-Mix

Product Data Sheet

Description:

UltraKote 1 Pre-Mix is a proprietary mixture of Portland Cement, sand, fiber and proprietary additives.

Uses:

A one-step base coat used over woven wire, metal lath and prepared concrete masonry. UltraKote 1 Pre-Mix can also be used as a surface leveler or a scratch and brown.

Color:

Natural gray

Packaging:

90 lb. (40.77 kg) paper sack

Coverage:

Approximate coverages are as follows:

- 45 ft² at 1/4" thick
 - 35 ft² at 3/8" thick
 - 25 ft² at 1/2" thick
- (coverage will vary depending on substrate)

Mixing:

To begin, place 1 to 1.5 gallons of potable water into a mechanical mixer. As the mixer is running add one 90 lb. bag of UltraKote 1 Pre-Mix. Gradually add the remaining .5 to 1 gallons of potable water and blend until the desired consistency is achieved (about 4 to 5 minutes). Stop the mixing and allow the material to slake for 3 to 4 minutes. Then start the mixing again to break the initial set (usually 1 to 2 minutes).

Working time per batch is 45 minutes or less. **NOTE:** *The amount of water needed to reach the desired workability will vary with temperature, humidity, wind, exposure, and site location or region.*

Limitations:

Use UltraKote 1 Pre-Mix when surface and ambient conditions are above 38° (13°C) and below 110° (37.5°C) during application and cure time. UltraKote 1 Pre-Mix is not recommended for use over painted surfaces or stucco accessories. Expansion joints are required every 144 ft.². UltraKote 1 Pre-Mix is not a finish product. Weather conditions may affect drying time and workability.

Surface Preparation:

Woven wire and metal lath must be securely fastened to wall assembly. Surfaces must be clean and free of bond-inhibiting materials. Use UltraBond when applicable.

Application:

UltraKote Pre-Mix should be applied at a minimum thickness of 3/8", not to exceed 1/2" in one application. Enough material should be applied to cover all surfaces uniformly. UltraKote Ultra-Bond can be used to increase tensile and flexural strength. Always work to a wet edge to avoid cold joints.

Curing/Drying:

UltraKote 1 Pre-Mix must be kept moist for at least 48 hours. Start light fogging after initial set, 1-2 hours. Fully cured in 28 days.

Storage/Shelf Life:

Product is good for one year when stored in a cool dry place and out of direct sunlight. Keep from freezing.

Clean Up:

Clean tools and equipment with water immediately after use.
